SUMMARY

Senior Software Engineer leveraging deep expertise in **Cloud service ecosystems** to engineer high-performance applications. Proven leader in centralizing service workflows, upgrading legacy architectures, and implementing automated CI/CD pipelines. Combines sharp technical execution with Agile leadership to improve overall development velocity and product reliability.

EXPERIENCE

Senior Software Engineer

Far Bank Enterprises

June 2023 – Present, Seattle, WA

- Centralized and streamlined maintenance tasks for 13 services, including a wholesale customer order page, using Azure and CI/CD pipelines, increasing testing by 100% and improving system stability.
- Upgraded all services from .NET 5 to .NET 10, increasing readability and performance.
- Lead in-depth planning and development meetings using Agile methodology, allowing for tracked metrics on deployments and a solid view the lifecycle of bugs and the ticketing system.
- Spearheaded the integration of advanced monitoring and logging solutions for 10 services, utilizing Azure Monitor, which resulted in a 30% reduction in incident response times and enhanced diagnostic capabilities.
- Authored extensive documentation on service maintenance and workflows utilizing markdown tools.
- Directed Agile Scrum processes for continual project updates, enabling 25% increase in development velocity and reducing weekly sprint overrun by 40%, through methodical backlog grooming and sprint planning meetings.

Software Engineer II

mParticle

August 2021 – January 2023, New York, NY

- Designed and implemented seamless integration processes between company and Klaviyo APIs for optimized real-time data synchronization and efficient bulk updates, enhancing overall performance.
- Developed a comprehensive metrics capture system for tracking pull-request durations and build frequencies, utilizing analytical tools and data pipelines.
- Collaborated with team members to revamp pipeline processes, ensuring secure codebase transitions to CI/CD systems and smooth holiday blackout periods.
- Developed a comprehensive guide detailing engineering process workflows using Markdown documentation.
- Resolved technical inquiries for both clients and developers, delivering detailed guidance on product functionality and process flows using strong interpersonal communication skills.

Software Engineer

SkyKick

October 2018 – July 2021

- Engineered an updated service architecture for email transfers to Microsoft 365, leveraging C#, Docker, and SQL for enhanced performance.
- Enhanced deployment efficiency from 7 hours to 15 minutes through strategic Terraform script configuration.
- Reduced cloud spend by revising workflows and increasing throughput.
- Developed a streamlined backend for frontend integration, utilizing faster processes and supporting seamless customer migrations to the Microsoft cloud.
- Enhanced system scalability by automating server provisioning and deployment processes, leading to a 50% reduction in manual intervention and downtime, leveraging Docker and Azure DevOps.
- Debugged critical system errors that increased processing efficiency by 30% over a 3-month period, utilizing C# and SQL to ensure stable operation and minimal downtime.

EDUCATION

BA with a focus on Computer Science and Electrical Engineering

Washington State University • Pullman WA • 2018

SKILLS

Hard Skills: C#, Docker, Linq, Asp.net, Razor, Angular, RESTful APIs, Backend Services

Soft Skills: Leadership, Team Management, Workflow Design, Scrum Process, Agile Workflow, DevOps Familiarity, Stand-up Meetings
